Integração via protocolo ASTM

Boa tarde Pessoal,

Estou montando uma integração usando protocolo ASTM via Interoperabilidade, porém estou com problema no retorno da comunicação a mensagem ficam em Loop e não retorna a informação para o simulador de device que está executando a operação.

The screenshot shows the InterSystems Developer Community interface. On the left, a session log displays four messages (1-4) between 'EnsLib.EDI.ASTM.Service.TCPService' and 'EnsLib.EDI.ASTM.Operation.TCPOperation'. Message 1 is sent from Service to Operation, message 2 from Operation to Service, and message 3 from Service to Operation. Message 4 is a response from the system. On the right, the 'Conteúdo' (Content) view shows the raw content of the ASTM P Document, including headers like 'ENSEMBLE' and 'Patient Information' with 4 segments.

Alguém de você já trabalharam com esse protocolo e conseguem me ajudar a destrinchar esse protocolo?

Configurações que estão no SERVICE:

```
<Item Name="EnsLib.EDI.ASTM.Service.TCPService" Category="" ClassName="EnsLib.EDI.ASTM.Service.TCPService" PoolSize="2" En
<Setting Target="Adapter" Name="Port">3083</Setting>
<Setting Target="Host" Name="TargetConfigNames">labfila.bp.fila.Process</Setting>
<Setting Target="Adapter" Name="StayConnected">1</Setting>
<Setting Target="Adapter" Name="ReadTimeout">300</Setting>
<Setting Target="Host" Name="ReplyMode">App</Setting>
<Setting Target="Adapter" Name="AllowedIPAddresses">localhost</Setting>
<Setting Target="Adapter" Name="GetReply">0</Setting>
<Setting Target="Host" Name="GenerateSuperSessionID">1</Setting>
```

Configurações que está no Operation:

```
<Item Name="EnsLib.EDI.ASTM.Operation.TCPOperation" Category="" ClassName="EnsLib.EDI.ASTM.Operation.TCPOperation"
<Setting Target="Host" Name="PartnerService">EnsLib.EDI.ASTM.Service.TCPService</Setting>
<Setting Target="Host" Name="ReplyCodeActions">E#ErrFailureTimeout=W</Setting>
<Setting Target="Host" Name="SearchTableClass">EnsLib.EDI.ASTM.SearchTable</Setting>
```
